

Publishing Static Websites

So you know how to make websites, huh?

Great! Let's deploy your websites so that everyone can see!

What is static hosting?

What's a domain name?

Publishing a website, step by step

- 1) Code your website
- 2) Find a place to host your site
 - a) GoDaddy, NameCheap
 - b) Netlify, AWS S3
 - c) Surge.sh
- 3) Get a domain name
 - a) GoDaddy, NameCheap
 - b) Google Domains
- 4) Update your domain's A Record
 - a) Point it to your hosting service

What if I have multiple HTML pages?

Treat your domain name like a file directory!

For Example:

If my domain is `http://adam.com...`
